INTRODUCTION

Single Package Vertical Air Conditioners and Heat Pumps by Johnson Controls offer the ultimate in HVAC design flexibility.

The Single Package Vertical Unit (VP-Series) is a compact through-the-wall packaged system, capable of providing total heating and cooling functions for a single zone or multiple rooms. Unlike conventional horizontal equipment, each Single Package Vertical Unit has been designed with sufficient air-handling capacity for ducted installations. The Single Package Vertical Units are ideally suited for the perimeter zones of buildings such as:

- Hotels and Motels
- High-Rise Apartments / Condominiums
- Hospitals / Nursing Homes
- Dormitories
- Renovated Office Space

The VP-Series unit is installed in a closet having an exterior wall. Wall mounting sleeves for various wall thicknesses are available for installation during building construction. Final installation is reduced to sliding the unit onto the mounting sleeve, and connecting the electrical supply. The result is a low-cost installation, and allows delivery of the units to be deferred until just before occupancy.

LISTINGS / CERTIFICATIONS:

PRODUCT OVERVIEW

Refrigerant

R-410A

Sizes

0.75 - 3 Tons (2.6 – 10.6 kW)

Models Available

- Air-to-Air Heat Pump with Electric Heat (VPP)
- Air Conditioner with Electric Heat (VPC)
- Air Conditioner with Hydronic Heat (VPH)

Product Features

Mechanical

- Cabinet constructed of heavy gauge corrosion-resistant galvanized steel
- Streamlined installation using factory-provided wall sleeve*
- Fully insulated with 1/2" thick, high-density acoustic fiberglass insulation
- Convenient indoor access to all parts and service needs*
- Standard units come with provisions for outside air intake*
- Sound minimizing design*
- Forward curved double-width double-inlet (DWDI) direct-drive centrifugal blowers are utilized
- High refrigerant pressure safety switch (manual reset) will shut down the unit if pressure exceeds 610 psig
- Service gauge ports (low and high side Schrader valves for maintenance and diagnosis)
- Each refrigeration circuit is thoroughly evacuated, and fully charged with refrigerant prior to shipment
- Exterior grilles - available in five standard colors or custom match*
- Integral duct-collar*
- Electric heating available from 2KW to 10KW
- Hydronic heating available with 2 - 3 row coils
- Filters are accessible from front of unit

Electrical

- PSC motors*
- Standard non-fused electrical disconnect provided for service convenience and maintenance
- Controlled by mechanical or electronic heat-pump thermostat
- Factory wired with all necessary control functions*
 - Anti-short cycle compressor protection
 - Random start delay
 - Positive compressor lockout in the event of high pressure/low temperature cutout
 - Low suction temperature thermostat

* See Product Details section for more information

PRODUCT OVERVIEW

Product Details

Standard Units Come with Provisions for Outside Air Intake

- A mechanical fresh air intake, with adjustable damper, is provided to meet code requirements for fresh air introduction. This ventilation air minimizes infiltration by pressurization of the conditioned space.

Sound Minimizing Design

- Like the rest of the cabinet, the compressor enclosure is insulated with sound attenuating 1/2 inch thick, 2-pound density insulation. Compressors are mounted on rubber isolators to minimize sound and vibration transmission. Large diameter blower wheels are employed to provide required airflow performance at minimum sound levels.

Exterior Grilles - Available in Five Standard Colors or Custom Match

- The factory provides standard powder painted exterior grilles in Beige, Sand, Medium Brown, Slate, and White. Custom color match grilles can also be provided. See the back cover for standard grille colors.

Integral Duct-Collar

- An integral duct-collar is provided on the indoor blower discharge opening. See Dimensional Data for dimensions for the duct connection.

PSC Motors

- Fan motors are PSC types, with minimum three (Hi-Med-Low) speeds on indoor fan and one speed on outdoor fan. The PSC motors feature permanently lubricated bearings and are provided with internal thermal overload protection.

Factory Wired With All Necessary Control Functions

- All units are factory wired with a 24-volt control circuit to allow for connection to a factory or field provided mechanical or electronic heat-pump thermostat. Both cooling and heat pump models feature an ambient outdoor temperature sensor to lockout compressor operation below 40°F. The factory also provides a low suction temperature thermostat to prevent evaporator icing during cooling demands with low outdoor air temperature.

Streamlined Installation Using Factory-Provided Wall Sleeve

- A factory-made wall sleeve is required to finish the wall opening. The sleeve can be installed during building construction, and the unit cabinet does not have to be installed until late in the construction cycle. Unit installation is reduced to simply inserting the cabinet into the wall sleeve and making duct and electrical connections. Wall sleeves are available in depths from 5" to 15". A condensate drain connection is available via a female pipe thread fitting located on the bottom of the wall sleeve. See sleeve diagrams on page 5.

Convenient Indoor Access to All Parts and Service Needs

- Units allow for service access to the thermal expansion valve, electric heater, condenser blower/motor, compressor, and electrical components. Access is included for all important refrigeration circuit components, also including the liquid line filter drier and service gauge ports. Filters can be changed easily with front-side access to the filter rack. A standard non-fused electrical disconnect is provided to easily disconnect power before servicing the unit. See unit diagrams on page 5 for service locations.

GUIDE SPECIFICATIONS

INSTRUCTIONS

Text denoted in italics with square brackets [...] indicates there is a choice to be made between one or more variables. (i.e. A possible scenario for the following "... connection to a [single] [multi] stage [cool] [heat and cool] thermostat.", is "connection to a single stage cool thermostat.")

1. Packaged Air-to-Air, thru-the-wall, Air Conditioner and Heat Pump

- a. Unit is a Johnson Controls Single Package Vertical Unit, indoor self-contained, thru-the-wall [heat pump and air conditioner] [air conditioner], fully charged with R-410A refrigerant, and utilizing a high efficiency scroll or rotary compressor for [cooling and in reverse cycle for heating] [cooling].
- b. Condenser air is to be discharged through outdoor louver via wall sleeve opening.

1.1 Codes and Certifications

- a. Unit shall be rated in accordance with ARI standard 390-01.
- b. Unit shall meet or exceed ASHRAE 90.1 requirements.

1.2 General

- a. The cabinet shall be constructed of corrosion resistant galvanized steel.
- b. Interior cabinet insulation shall be ½" thick high density insulation, attached with a non-flammable and moisture resistant adhesive.
- c. The base of the unit shall have a baked-on polyester coating for corrosion resistance.
- d. Unit shall include a ¾" condensate drain that is to be isolated from the air stream and located at the bottom.
- e. Unit shall be supplied with an integral duct collar at the indoor blower discharge.
- f. Unit shall be designed for mounting in a wall sleeve.
- g. Unit shall include a built in adjustable fresh air damper. Fresh air intake shall be integral to the sleeve and separated from condenser air stream. Damper shall include a washable mesh filter.
- h. A 1-inch thick throwaway return air filter shall be provided with all models and accessible from the front of the unit.

- i. All operating components of the mechanical systems shall be completely enclosed in the cabinet.
- j. All components, wiring and inspection areas shall be completely accessible through removable front panels.
- k. Shall include weather-resistant gasket with adhesive backing to mate wall sleeve with unit.
- l. Shall be factory wired to a low voltage terminal strip for connection to a [single] [two] stage [cool] [heat and cool] thermostat.

1.3 Refrigeration System

- a. Units shall have a high efficiency scroll or rotary type compressor mounted on rubber isolators.
- b. Refrigeration circuit shall be evacuated and fully charged with R-410A refrigerant.
- c. Compressor shall have built-in overload protection. Circuit shall include a solid state time delay relay for random-start and anti-short cycle protection.
- d. Refrigeration circuit shall have an adjustable bi-flow thermal expansion valve with an external equalizer, bi-flow liquid line filter drier, and service gauge ports.
- e. A low suction temperature thermostat shall be included to prevent evaporator icing during low outdoor ambient conditions.
- f. Units shall have a manual-reset high refrigerant pressure switch to guard against excessively high system pressures.

1.4 Heat Pump

- a. Unit shall utilize reversing valve for first stage heating down to 40°F.
- b. Unit shall have an ambient temperature sensor to lock out compressor operation below 40°F.
- c. Reversing valve solenoid shall be energized in cooling mode only.

1.4 Heat Pump with Electric Heat

- a. Unit shall utilize reversing valve for first stage heating down to 40°F.
- b. Unit shall have an ambient temperature sensor to lock out compressor operation below 40°F.
- c. Reversing valve solenoid shall be energized in cooling mode only.

GUIDE SPECIFICATIONS

- d. An electric coil shall provide second stage heating for outdoor temperature below 40°F. Coil shall have an auto reset limit control and relays shall bring the heating elements on and off, in sequence and in equal increments, with a time delay between each element.

1.4 Hydronic Heat

- a. Unit shall utilize a two (2) or three (3) row hot water coil for heating.
- b. Minimum entering water temperature is to be 120°F and a maximum of 200°F.

1.4 Cooling Only Refrigeration System

- a. Unit shall have no provision for heating.
- b. Unit shall have an ambient temperature sensor to lock out compressor operation below 40°F.

1.5 Indoor Outdoor Fans

- a. Evaporator and condenser fans shall be forward curved, double inlet and double width, direct-drive centrifugal blowers.

- b. Condenser fan to be single-speed, direct drive centrifugal type.
- c. Evaporator motor shall be PSC type and have a minimum of three (3) speeds.
- d. Fan motors shall have internal thermal overload protection.
- e. Blower wheels shall be galvanized and housings painted for corrosion resistance.

1.6 Accessories/Options

- a. Wall sleeve with integral base platform.
- b. Corrosion resistant outdoor louver (primed or powder coated).

1.7 Installation

- a. Install unit as shown on drawings and in accordance with manufacture's installation instructions.
- b. Start-up sheet shall be completed and a copy shall be supplied to the owner and manufacturer.
